Re: PG&E's Panoche Substation Expansion

Dear Mr. King:

PG&E has discovered a minor calculation error in the dimensions of the expanded area of the substation. In previous communications with you, we indicated that PG&E would acquire an area approximately 300 feet by 320 feet for the expanded substation. In fact, the area is approximately 250 feet by 435 feet. Attached is an aerial diagram of the substation showing the existing and proposed substation components and the boundaries of the additional property.

None of the other information we previously provided is affected by this miscalculation. We would appreciate your conveying this correction to the California Energy Commission.

Thank you for your continuing assistance.

Sincerely,

Patricia M. Healy, P.E.
Sr. Project Manager
