Docket Number: 08-AFC-08A

Comments in Support of Motion to Terminate (Part 4)

Attached are the names of 6,982 Californians, who together submit the following comment in support of Sierra Club and other intervenor's motion to terminate this proceeding.

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Additional submitted attachment is included below.

Also, end fracking in this state which not only uses far too much water, especially during this severe drought, but is insane to be doing anyways given the impact to the environment and the climate and thus should be halted regardless of the drought.

Sincerely,
Richard Vann

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Heather Saxon

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Susan Sanocki

Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Kimberly Scibetta

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Jane Lagas

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Ronald Brown

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

Water is a precious resource- maybe the most precious one we have after people.

The food grown in California is a valuable resource also- more important than hydrogen energy right now.

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Lowell Gomes

Subject: The Hydrogen Energy California Project cannot go forward.

Dear California Energy Commission,

Really, there's no need to keep "reviewing" this project. It uses 2.5 billion gallons of water a year, and we have no water. Some scientists are predicting a ten-year drought, and their sources for these predictions are good.

Terminate this proceeding and work on clean water-efficient energy. Wind in particular uses no water.

Please don't wait until you turn on your faucet and nothing comes out.

Sincerely,
Debbie Notkin

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Toni Kimball

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Sally Scott

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Lowell Gomes

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Urs Hoelzle

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Michael Molamphy

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

I can't understand WHY someone would even THINK of opening up a coal plant in horribly polluted California. The Valleys of California (I live in one BTW) are susceptible to "temperature inversions" that act as domes to lock smog close to the ground. I also can't help but think that Kern County was chosen for this plant because the Socio-Economic Status of the county is lower than almost every other county in California. The constituency there are poor Latino and poor White people who don't have the wherewithal to fight back.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law. It strikes me as silly that we are still persisting in the folly of hydraulic fracturing for gas and oil, which is also wasteful and polluting.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Allan Francke

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Donna Carr, M.D.

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Steven Curley

I am told that the source of energy for this power plant is coal, not hydrogen.

If this is true, there seems to be a clear violation of the concept of "truth in advertising" going on with this project. If the CEC is going along with this deception, it should be ashamed.

Sincerely,

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
John Crump

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future. Honestly, I cannot fathom why California, in 2015, is even considering approving construction of a coal-fired power plant, when sustainable methods of generating clean energy are available at competitive cost. All over the nation, coal-fired plants are shutting down and coal mines are being scaled back or closing altogether. Energy from coal is the energy of the past; let's maintain California's reputation as a leader in energy efficiency and sustainability by killing this archaic project now.

Sincerely,
Charles Harris

California Energy Commission

Subject: The Hydrogen Energy California project

Dear California Energy Commission,

Please stop reviewing the Hydrogen Energy California project. The developer provides no information about water use and greenhouse gas pollution.

California is in the midst of the worst drought in state history. Why should we hand over 7,500 acre-feet of water every year to an energy project with no proven data record. Local farmers need water.

Please show the voters a clear and enforceable agreement to sequester or contain the greenhouse gas pollution this project will produce; as presented it cannot be built according to state law.

The CEC must terminate this time wasting proceeding and begin to prioritize projects which will move the state in the direction of a clean energy future.

In addition, this facility and its operation could significantly and negatively impact the air quality standards in the Central Valley. This area of California already has a very high incidence of asthma and other health issues.

Please consider the negative impact and how it affects the people living in the vicinity of the project.

Sincerely,
Christina Rios

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
George Villalvazo

This is one of the most thoughtless purposes I can imagine to be involved in at this particular time, a 4 year drought and I know what the air quality down there is, putrid. So, no, this is not what California needs right now - actually, who ever needs a coal plant in their environs? Honestly?

Sincerely,
Wilma Ellis

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Roberta Sparkman

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,
Katherine Harper

Subject: Terminate reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I strongly urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

With California in the midst of the worst drought in state history, we cannot afford to hand over 7,500 ac/ft of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law. San Joaquin Valley residents already suffer greatly from poor air quality, which a coal plant would greatly exacerbate and would be a giant step backward from statewide efforts to reduce global warming

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.
