James Reede, Ph.D.
Project Manager
California Energy Commission
1516 Ninth Street, MS-15
Sacramento, CA 95814

Dear Dr. Reede;

I am writing concerning the proposed Vernon Power Plant (Docket Number 06-AFC-4). Papa Cantellas has been located in Vernon for a 18 of years, and one of Vernon's primary attractions is available electrical energy at reasonable costs. We utilize large amounts of electric energy and power interruptions can be extremely damaging to our operations. We feel that it is essential that southern California insures available, stable, local power sources – transmission from far off sites is our weak link. The proposed power plant represents such a local source of power and Vernon, an industrial area since 1905, represents an ideal location.

In addition, the City of Vernon has selected the best available technology and the Vernon Power Plant has been projected to have a significant beneficial air quality impact on the Los Angeles basin. As residents of the Los Angeles basin, our employees fully support the addition of the proposed Vernon Power Plant since it could displace older, more polluting southern California power plants.

We, therefore, strongly support the proposed Vernon Power Plant and urge the Energy Commission to approve the City of Vernon's application.

Sincerely,

Christian P Stafford
Vice President
