 DearCommissioner Byron,

Please reconsider your approval of the Russell City power plant in Hayward! It was approved without an environmental impact report, and before those of us who live and work here were aware of it. It is so big, that approving the Russell City power plant, would be the same as giving a green light to build the equivalent of two power plants at one location. Plus, even more power plants are proposed!

Please do not put power plants here near 2 colleges, a middle school, and an elementary school! It will detrimentally affect those of us who work here, and make it hard to attract students to our college. All of us who work, live, or study here will have pollutants in our lungs - did you really intend that to happen? Would you approve of this plant near where your family lives and works?

Please let me know what you intend to do about this.

Regards,
 Carolyn
