

Explanation

- Location of seismic profile shown on Plate 3b
- - - - Faults, solid where well located, dashed where inferred or approximately located, dotted where buried by more than 20 milliseconds of undeformed strata
- ▨ Graben, queried where full extent is uncertain

Note: Depth values on seismic profile assume a velocity of 1600 m/sec.

Graben at northern end of Point Buchon fault zone shown on (a) 2D seismic-reflection profile 1120, and (b) MBES bathymetry

DCPP 3D/2D Seismic-Reflection Investigation
