Subject: Docket No. 06-OIR-1-- Comments on proposed GHG emissions standard regulations

California Energy Commission
Docket No. 06-OIR-1
1516 9th Street, MS-4
Sacramento, CA 95814

Dear Commissioners,

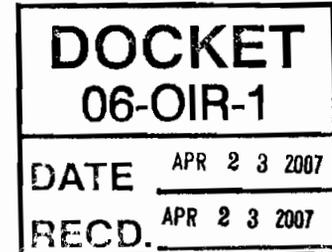

I strongly support the proposed "Regulations Establishing and Implementing a Greenhouse Gases Emission Performance Standard for Local Publicly Owned Utilities." These regulations would ensure that utilities are required to place their long-term investments in clean energy sources, thus helping California meet its global warming emissions reduction targets under the Global Warming Solutions Act (AB 32) and avoiding the unnecessary exposure of Californians to hundreds of millions of dollars in extra costs resulting from new investments in highly polluting energy sources.

We must protect all Californians equally from the financial and reliability risks of continued reliance on electricity sources that produce high amounts of global warming pollution. The California Public Utilities Commission has already adopted strong rules to implement and enforce SB 1368 for the state's investor-owned utilities, and the California Energy Commission is obligated to adopt consistent regulations for the state's local publicly owned utilities.

The proposed regulations provide for necessary state oversight to ensure compliance with the standard, while allowing the publicly owned utilities enough flexibility to continue purchasing the cleanest, most affordable power for their customers. In addition, the proposed regulations would ensure a consistent statewide standard for all California utilities. I strongly urge the commission to adopt the proposed regulations to implement and enforce SB 1368 for California's local publicly owned utilities.

Sincerely,

Yuen Lee

California Energy Commission
Docket No. 06-OIR-1
1516 9th Street, MS-4
Sacramento, CA 95814

Dear Commissioners,

I am writing to let you know that I strongly support the proposed "Regulations Establishing and Implementing a Greenhouse Gases Emission Performance Standard for Local Publicly Owned Utilities." As I understand them, these regulations would ensure that utilities are required to place their long-term investments in clean energy sources, thus helping California meet its global warming emissions reduction targets under the Global Warming Solutions Act (AB 32) and avoiding the unnecessary exposure of Californians to hundreds of millions of dollars in extra costs resulting from new investments in highly polluting energy sources.

I believe that all Californians should be equally protected from the financial and reliability risks of continued reliance on electricity sources that produce high amounts of global warming pollution. The California Public Utilities Commission has already adopted strong rules to implement and enforce SB 1368 for the State's investor-owned utilities, and the California Energy Commission is obligated to adopt consistent regulations for the state's local publicly owned utilities.

The proposed regulations provide for necessary State oversight to ensure compliance with the standard while allowing the publicly owned utilities enough flexibility to continue purchasing the cleanest, most affordable power for their customers. In addition, the proposed regulations would ensure a consistent statewide standard for all California utilities.

I therefore strongly urge the Commission to adopt the proposed regulations to implement and enforce SB 1368 for California's local publicly owned utilities.

Thank you for your consideration of my comments.

Sincerely,

Subject: Docket No. 06-OIR-1-- Comments on proposed GHG emissions standard regulations

California Energy Commission
Docket No. 06-OIR-1
1516 9th Street, MS-4
Sacramento, CA 95814

Dear Commissioners,

I strongly support the proposed "Regulations Establishing and Implementing a Greenhouse Gases Emission Performance Standard for Local Publicly Owned Utilities." These regulations would ensure that utilities are required to place their long-term investments in clean energy sources, thus helping California meet its global warming emissions reduction targets under the Global Warming Solutions Act (AB 32) and avoiding the unnecessary exposure of Californians to hundreds of millions of dollars in extra costs resulting from new investments in highly polluting energy sources.

We must protect all Californians equally from the financial and reliability risks of continued reliance on electricity sources that produce high amounts of global warming pollution. The California Public Utilities Commission has already adopted strong rules to implement and enforce SB 1368 for the state's investor-owned utilities, and the California Energy Commission is obligated to adopt consistent regulations for the state's local publicly owned utilities.

The proposed regulations provide for necessary state oversight to ensure compliance with the standard, while allowing the publicly owned utilities enough flexibility to continue purchasing the cleanest, most affordable power for their customers. In addition, the proposed regulations would ensure a consistent statewide standard for all California utilities. I strongly urge the commission to adopt the proposed regulations to implement and enforce SB 1368 for California's local publicly owned utilities.

Sincerely,

Monika Jauregui

Docket No. 06-OIR-1
1516 9th Street, MS-4
Sacramento, CA 95814

Dear Commissioners,

hi my name is jake im eleven years old I would like to say a few things. When industries put out lots of smog into the air you effect our planet badly. it kills animals and my mom is convinsed it causes chiled hood disescs. which i agree with. All the animals you kill there arn't that much of. In the rain forest there are animals that are really amasing, they are all diferent size, shape and color. Even though you profit off all of this the planet wont last forever. all of this kills animals our planet and causes global warming. Last but not lease if you disagree you can continue killing our planet and animals, how do you feel.

p.s I am sorry if this letter sounds mean it is that I am serious about this subject.

Sincerely,

jake waltrip

I strongly support the proposed "Regulations Establishing and Implementing a Greenhouse Gases Emission Performance Standard for Local Publicly Owned Utilities." These regulations would ensure that utilities are required to place their long-term investments in clean energy sources, thus helping California meet its global warming emissions reduction targets under the Global Warming Solutions Act (AB 32) and avoiding the unnecessary exposure of Californians to hundreds of millions of dollars in extra costs resulting from new investments in highly polluting energy sources.

We must protect all Californians equally from the financial and reliability risks of continued reliance on electricity sources that produce high amounts of global warming pollution. The California Public Utilities Commission has already adopted strong rules to implement and enforce SB 1368 for the state's investor-owned utilities, and the California Energy Commission is obligated to adopt consistent regulations for the state's local publicly owned utilities.

The proposed regulations provide for necessary state oversight to ensure compliance with the standard, while allowing the publicly owned utilities enough flexibility to continue purchasing the cleanest, most affordable power for their customers. In addition, the proposed regulations would ensure a consistent statewide standard for all California utilities. I strongly urge the commission to adopt the proposed regulations to implement and enforce SB 1368 for California's local publicly owned utilities.

Sincerely,
