I am amazed that anyone would even consider the concept of government remotely regulating the temperatures in people's homes:

http://www.americanthinker.com/2008/01/who_will_control_your_thermost.html

Have you people lost your minds? What's next? Remote locks on refrigerator doors when some government employee decides people are getting too fat and as a result straining the health system?

The only thing this stupid regulation will achieve is a dramatic increase in the sale of non-regulated thermostats as people flock to bypass this insane concept. What will you do then? Regulate interstate commerce to put a stop to it? Arrest importers of contraband thermostats?

Just a brain dead concept. Drop it now.
