Subject: Programmable Communication Thermostat

Programmable Communication Thermostat

We strongly protest the use of anything that would allow monitoring of a persons private life and home.

This proposal is out of **Orwell's 1984**. It is **something** that must not be allowed in the United States of American.

What are you thinking? This is not beneficial to anyone unless they want to live in a police state.

Re: The proposal, set to be considered by the commission Jan. 30 , requires each thermostat to be equipped with a radio communication device to send "price signals" and automatically adjust temperature up or down 4 degrees for cooling and heating, as California's public and private utility organizations deem necessary.

In no way is this acceptable!
