Dear Sirs,

I have been conservative with my energy use. I don't even use my air conditioner when it is 100 degrees. I use my fans and keep the window coverings down. In the winter I bundle up and keep the thermostat at 55 degrees. This only varies if I have visitors.

I have done my part and believe in conservation. However, I will not tolerate outside control of my home in any way. This proposal goes too far. We don't live in Russia or China. Furthermore, why would I trust the power companies to fairly regulate me in the future when they defrauded us a few years ago under Gov Gray Davis. This proposal seems innocuous initially but I fear that down the road it will go out of control.

You should be promoting nuclear power plants as the population is growing and at some point you are not going to be able to serve the state without them. I don't see why this is such a hard concept.

I can only assume that the powerful energy companies are keeping us from going forward with nuclear power in order to maintain energy monopoly in this state.

No on PCTs. Get nuclear energy.
