California Energy Commission

DOCKETED

09-RENEW EO-1

TN # 74441

FEB 02 2015

I can only hope these plans included plenty of enforcement provisions. The desert is fragile and once disrupted will take eons to heal. Enforcers will need to be on-site at all times. If not, there will be "mis-understandings", "accidents", etc by contractors and others. Once done, damage cannot be remedied. Heavy fines might help to enforce, but would have to be more than what was gained by "accidents", etc. Think of a tree: once cut down, will not regrow.

Sure another could be planted, but wouldn't be the same as the one cut for many years, if ever. I think a better plan would be to help those of us in favor of Solar Power with the up-front costs of putting it on our roofs. We could pay after-the -fact by the savings.

I've been told by several contractors I have an ideal site, but can't afford the up-front costs on a fixed income. An a distribution system would not be needed, except very locally. I understand some energy is lost in the distribution process. sincerely, Sarah Curtis P.O. Box 345/ Fawnskin, CA 92333
