Subject: DRECP NEPA/CEQA

Comment on the DRECP;

Please change your plans to put more resources and planning into point-of-use (roof top solar) and less use of public lands. Desert scapes are as important as other lands in recreation, vistas, nature conservation and habitat preservation. Large utility companies should not have unfettered claim to public lands and fence out public use. Our American "sea to shining sea" landscapes are being totally destroyed by wind farm industrialization. The US can achieve energy independence with increased solar as technology brings down cost.
