**Re: Notice of Receipt of Complete Application**  
**Project Number: S-1093741**

Dear Mr. Skannal:

The San Joaquin Valley Air Pollution Control District (District) has received your Authority to Construct application for a 250 MW integrated gasification combined cyclic power generation facility, at Section 10, Township 30S, Range 24E near Tupman, CA. Based on our preliminary review, the application appears to be complete. This means that your application contains sufficient information to proceed with our analysis. However, during processing of your application, the District may request additional information to clarify, correct, or otherwise supplement, the information on file.

We will begin processing your application as soon as possible. In general, complete applications are processed on a first-come first-served basis.

It is estimated that the project analysis process will take 825 hours, and you will be charged at the weighted hourly labor rate in accordance with District Rule 3010. This estimate includes the following major processing steps: Determining Completeness (25 hours), Engineering Evaluation (400 hours), BACT Analysis (200 hours), Health Risk Assessment (100 hours), CEQA Analysis (0 hours) and Permit Preparation (100 hours). The current weighted labor rate is \$90.00 per hour, but please note that this fee is revised annually to reflect actual costs and therefore may change. No payment is due at this time; an invoice will be sent to you upon completion of this project.
