

California Energy Commission

DOCKETED
11-AFC-3

TN # 70153

MAR 27 2013

March 27, 2013

California Energy Commission
Eric Solorio, Project Manager
1516 Ninth Street
Sacramento, CA 95814-5512

Subject: Quail Brush Generation Project
Application for Certification Docket No. 11-AFC-3

Dear Mr. Solorio:

Enclosed for inclusion in the above-referenced docket are over 3,400 petitions voicing opposition to the Quail Brush Generation Project.

Herein submitted are a total of approximately 3,408 statements of opposition to Quail Brush, composed of 2,759 hand-signed petitions, 621 online-signed petitions, and 28 online comments.

These petitions were collected from 03/21/12 to 02/28/13 by Save Mission Trails volunteers. They *are a subsequent set from the already 1,021* collected up to 03/20/12 by Stop the Santee Power Plant.org, which were posted on the CEC Docket on 10/24/12.

Concerned citizens in San Diego and beyond continue to hear about the power plant every day. We anticipate thousands more signatures and letters will be submitted to the CEC in the coming weeks for future docketing.

Thank you for adding the attached to the docket at your earliest opportunity.

Respectfully,

Jeff Kahn
Save Mission Trails board member

Save Mission Trails Corporation, 8824 Annandale Way, Santee, CA 92071

Inspiring the preservation and conservation of Mission Trails Regional Park and adjoining East Elliott Community Open Space

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease a noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary. Agreed to by the following signers:

Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Agreed to by the following signers:

Petition to Stop the Mission Trails Power Plant
 aka The Quail Brush Power Generation Project, aka Santee Power Plant
 Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Agreed to by the following signers:

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case -
Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quite, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quite, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case -
Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quite, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quite, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease a noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case -
Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease a noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property value will decrease a noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Agreed to by the following signers:

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project (QBGP)
Addressed to: California Energy Commission, San Diego City Council, and all agencies

We, the undersigned, petition the California Energy Commission, the San Diego City Council, and all agencies, to categorically reject any proposals by any entity to construct a power plant adjacent to Mission Trails Regional Park (MTRP) – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with the East Elliott Community Plan, which appropriately designates the site as *Park, Open Space, and Recreation*, and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proposed project is located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. Additionally, the QBGP is sited in the Mission Trails Design District, correctly slated for natural habitat preservation and trail expansion, and is a key wildlife corridor. As a taxpayer, we object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions.

Furthermore, local residents and park users will be negatively impacted by fire danger, air pollution, noise, decreased property values, and visual blight. The QBGP siting threatens the health, recreation, natural beauty, quiet, and quality of life of all San Diego County residents who use MTRP and those who live and work and go to school in the adjacent communities.

We, the undersigned, urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

SAVE MISSION TRAILS PETITION

I am in opposition to the proposed zoning changes for the Quail Brush Generation Project. Our open space near Mission Trails Regional Park is precious and cannot be mandated away. A 100MW power plant destroys the environment, watershed, ecosystem, air quality, animal habitats and raises pollution levels.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation’s largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego’s laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site’s zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City’s Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project (QBGP)
Addressed to: California Energy Commission, San Diego City Council, and all agencies

We, the undersigned, petition the California Energy Commission, the San Diego City Council, and all agencies, to categorically reject any proposals by any entity to construct a power plant adjacent to Mission Trails Regional Park (MTRP) – one of the nation’s largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego’s laws, ordinances, regulations, and standards (LORS). The project conflicts with the East Elliott Community Plan, which appropriately designates the site as *Park, Open Space, and Recreation*, and the Municipal Code, which designates the site’s zoning as single-family residential (RS-1-8). The proposed project is located within the City’s Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. Additionally, the QBGP is sited in the Mission Trails Design District, correctly slated for natural habitat preservation and trail expansion, and is a key wildlife corridor. As a taxpayer, we object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions.

Furthermore, local residents and park users will be negatively impacted by fire danger, air pollution, noise, decreased property values, and visual blight. The QBGP siting threatens the health, recreation, natural beauty, quiet, and quality of life of all San Diego County residents who use MTRP and those who live and work and go to school in the adjacent communities.

We, the undersigned, urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project (QBGP)
Addressed to: California Energy Commission, San Diego City Council, and all agencies

We, the undersigned, petition the California Energy Commission, the San Diego City Council, and all agencies, to categorically reject any proposals by any entity to construct a power plant adjacent to Mission Trails Regional Park (MTRP) – one of the nation’s largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego’s laws, ordinances, regulations, and standards (LORS). The project conflicts with the East Elliott Community Plan, which appropriately designates the site as *Park, Open Space, and Recreation*, and the Municipal Code, which designates the site’s zoning as single-family residential (RS-1-8). The proposed project is located within the City’s Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. Additionally, the QBGP is sited in the Mission Trails Design District, correctly slated for natural habitat preservation and trail expansion, and is a key wildlife corridor. As a taxpayer, we object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions.

Furthermore, local residents and park users will be negatively impacted by fire danger, air pollution, noise, decreased property values, and visual blight. The QBGP siting threatens the health, recreation, natural beauty, quiet, and quality of life of all San Diego County residents who use MTRP and those who live and work and go to school in the adjacent communities.

We, the undersigned, urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

ocket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Quail Brush Power Generation Project addressed to the: CEC and all agencies

petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside
 nal Park – one of the nation’s largest natural urban parks and a national treasure.

QBGP is inconsistent with many of the City of San Diego’s laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott
 n, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site’s zoning as single-family
 resia (S-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The
 proposed project is also located within the City’s Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project
 consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project
 site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use
 provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all San Diego County
 residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to the Staff of the California Energy Commission

We demand that the evaluation of the proposed Quail Brush Power Plant so seriously affecting our community, our children, our parks and schools be evaluated not at the applicant's suggested 43% usage but at the 100% this incursion will be used.

Our health, our property values, and the lives of our children and elderly depend on your decision.

Warning: a power plant is planned at Mast & Hwy 52. The Project includes:

11 9.3 Mega-Watt natural gas-fired engines;

11 48 inch x 100 foot tall stacks;

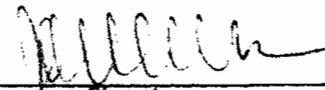

18 months of construction impact and extra traffic on the corner of Mast and West Hills Parkway.

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an industrial area, is irrational and unnecessary.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case -
Petition to Stop the Quail Brush Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to Stop the Mission Trails Power Plant
 aka The Quail Brush Power Generation Project, aka Santee Power Plant
 Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Agreed to by the following signers:

This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Subject: CEC record – Docket # 11 – AFC – 03 Quail Brush Power Generation Siting Case
Petition to Stop the Quail Brush Power Generation Project addressed to the: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park – one of the nation’s largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property values and quality of life of all Sandiego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to the parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

**Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies**

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends schools nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease a noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Petition Stop the Qualcomm Power Generation Project addressed to: CEC and all agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park - one of the nation's largest natural urban parks and a national treasure.

The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the city a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site.

The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the QBGP siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego County residents who use Mission Trails Regional Park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences.

We the undersigned urge the CEC and all agencies to implement the NO PROJECT ALTERNATIVE.

Petition to Stop the Mission Trails Power Plant
 aka The Quail Brush Power Generation Project, aka Santee Power Plant
 Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

Petition to Stop the Mission Trails Power Plant
aka The Quail Brush Power Generation Project, aka Santee Power Plant
Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by any entity to construct a Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.

"SENIORS VOICE" PETITION

A petition to the County of San Diego Air Pollution Control District and the California Energy Commission, in regards to the matter of the proposed Quail Brush Generation Project to be located on the West end of the City of Santee, California. We the undersigned respectfully request your respective agencies to consider the following in this most serious public health matter for senior citizens. There is a high percentage of elderly persons residing along Mission Gorge Rd. and throughout Santee. Elderly persons do not tolerate pollution in the same manner as healthy adult populations especially in hot weather when the power plant will likely be operating at full capacity due to peak energy demand. Many senior communities are already in pollution "hot spots" before the project is built, for example adjacent to Hwy 52 and Mission Gorge Rd. Please consider this situation when performing the air quality analysis.

Petition to the Staff of the California Energy Commission

We demand that the evaluation of the proposed Quail Brush Power Plant so seriously affecting our community, our children, our parks and schools be evaluated not at the applicant's suggested 43% usage but at the 100% this incursion will be used.

Our health, our property values, and the lives of our children and elderly depend on your decision.

Warning: a power plant is planned at Mast & Hwy 52. The Project includes:

11 9.3 Mega-Watt natural gas-fired engines;

11 48 inch x 100 foot tall stacks;

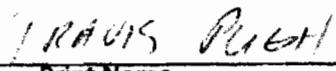

18 months of construction impact and extra traffic on the corner of Mast and West Hills Parkway.

Petition to the Staff of the California Energy Commission

We demand that the evaluation of the proposed Quail Brush Power Plant so seriously affecting our community, our children, our parks and schools be evaluated not at the applicant's suggested 43% usage but at the 100% this incursion will be used.

Our health, our property values, and the lives of our children and elderly depend on your decision.

Warning: a power plant is planned at Mast & Hwy 52. The Project includes:

11 9.3 Mega-Watt natural gas-fired engines;

11 48 inch x 100 foot tall stacks;

18 months of construction impact and extra traffic on the corner of Mast and West Hills Parkway.

I ride bikes with my little sister through this area and it would be a shame to ruin that for the sake of preparing for "future energy needs". Stop ruining the natural environment and trying to cram more people into an already highly-populated city.

I just don't understand how it can be legal for Cogentrix to have their lobbyists meet with CPUC behind closed doors. Lobbyists give money to politicians for political decisions, basically bribery. How can they bribe CPUC, which is supposed to make decisions regarding whether California needs the added energy?

wrong place for energy plant. it should be away from every city. behind that hill there is plenty of government land how come it is not being built in there and it is being offered close to school and park, how much bribe did the officials get to allow it?

With all of the development encroaching on the valuable public parks & land in San Diego County, the last thing we need is a power plant adjacent to the wonderful Mission Trails Park. Please reject the & all proposals that will pollute & destroy our beautiful open spaces. Thank you.

Please don't let this power plant get built. It's way too close to families, children, schools and Mission Trails park. It will be devastating to Santee which is a wonderful community. Please don't just hit the "easy button" with your decision. Thanks for listening. Jodee

The current zoning very rightly does not allow a power plant here. This zone should not be changed. This park is a precious resource that must not be violated. Another location must be found if this energy is even needed at this time, which is doubtful.

I would love to receive a bunch of flyers as my company encourages us to get involved with campaigns that we are passionate about. I see many clients a day. Is it possible to send me 50-100 flyers, I would probably be able to get those out within a week to 2 weeks... Is that possible? I look forward to hearing from you. Sincerely, Dana

I have tried for months now to get someone to listen but now it is almost too late. Do you realize on December 4, 2012, the San Diego Unified School District is opening public bidding for an 11 acre site in Tierrasanta off of Colina Dorado, near Clairemont Mesa Blvd. It was originally going to be a parking lot for a church but apparently that fell through. Now it will probably be condos. This is habitat for the endangered Fairy Shrimp as well as a commonly accepted part of Mission Trails Park. It is absolutely beautiful land. PLEASE HELP! See this link for more information: <http://www.sandi.net/Page/39264>

I believe in preserving Santee. I have lived here since 1985. This power plant will be devastating to our community. A more suitable place needs to be found. Santee is a smaller community. Pollution has risen due to the new freeways, the sewage plant smells awful. I cannot open my windows at night due to the smell. I miss the quiet evenings when we could leave our windows open, without listening to freeway traffic. Santee does not need more pollution! Mission Trails must be preserved!

It is clear that Cogrentrix does not care about what the people think or say. They have been voted down twice so far and have been sent a strong message that they are not wanted here but are still pursuing this site which happens to be next to a beautiful wildlife area that provides outdoor recreation for thousands of people on a weekly basis. It is also next to a little league park, high school and neighborhoods. It is clear there main goal is profits. They do not care about us. There are other ways and other places to make power.

1. The plant is too close to children, a pristine park and community. 2. Is this just an opportunity for a corporation to make a profit. May this plant be unnecessary? Is this an opportunity for us to become more efficient. Most people DO NOT Conserve enough. It's time for all of us to be responsible. 3. Climate Change is larger than this issue and what fossil fuel plants we don't build now will save us money and our lives in the future. 4. On a personal note, I had a small business in San Diego and my installed products save \$100 million dollars in electricity every year. This company allowed me to retire at 55. It is AC Energy Systems in Cardiff by the Sea, CA. By not constructing this small plant we can send a clear message to everyone that we in San Diego are doing what our government will not do enough of. Save San Diego. Save CA, Save the USA. Save the Planet. Renewable Energy yields 14 percent of US Elect Power now! 31% in CA!!!! Let us Take a Stand Together. Now is the Time. Yes We Can.

City councilmembers: To allow construction of this power plant in this location would constitute an egregiously irresponsible use of custodial power. Do the right thing by the residents of San Diego, who deserve pristine open spaces. We do not need to give up our natural parks in order to have reasonably priced energy.

This is one of the few places close to the downtown that gives people the opportunity to appreciate the natural world around them. As someone who trail runs in this park and has many friends who go birding here, a powerplant would be detrimental to both activities. There are plenty of industrialized areas in SD for a powerplant, please take it somewhere else!

Please leave the undisturbed natural habitat of Mission Trails alone! This is one of the only places in San Diego where you can get a little wilderness in the city. Let's not allow our beloved park to be turned into an industrial zone that would destroy the character of Mission Trails. Let's fight!

Mission Trails: A Must Needed Treasure of Nature for San Diego Cottonwoods, mountain peaks, and the stir of wildlife as the sun sets in Mission Trails Regional Park brings natural beauty and the sounds of nature so close to the city limits. Standing on a trail head vista looking out over the land of scattered cottonwoods, chaparral, and herb plants with mountain peaks of N. Fortuna and Kwaay Paay looming off in the distance is a tremendous sight, especially when the sprawl of suburbia sits within a stones throw from where I am standing. On the Nature Center Nature Loop one can quickly immerse themselves to the sounds and sights of nature. Walking along the San Diego river as it roars after some good rain fall; looking out over desert mountain terrain; and discovering the past by sidetracking off the main trail down to the river's edge where mortero covered rocks whisper how vital this land and river was and reminding us how vital they are still today. With perfect days spent communing with Southern California nature comes knowledge of how delicate this landscape is. With such little rainfall in San Diego and Southern California we live on a land unable to defend itself against our nature as humans. Sometimes the days are less than perfect when dryness gives rise to wildfires or santa ana winds circulate pollution in the air we breath, and vegetation struggles to survive as natural water flows have been damned up or rerouted into concrete channels as storm drains carrying many pollutants into the sea and on beaches. Yes, it isn't perfect but it has beauty we must respect so future generations may enjoy what we have enjoyed. If anything, living on the West Coast has taught me more than ever the Earth is delicate and it's natural

2012-09-19 @
9:08:17 PM

offerings, such as water, plants, trees, and wildlife can be severely damaged or destroyed by our very own human nature. We must tread lightly and begin to live harmoniously with our surroundings because not just the health of the land depends on it, but our very own health as humans as well.

Mission Trails is a jewel in the city and county of San Diego. This power plant would be a crime against the thousands of citizens who enjoy the park and who live near the park. The power is not needed, due to the thousands of homeowners and businesses in the county who have converted to solar energy. Please stop this project which will profit a few at the expense of all the rest of us. San Diego should be more forward thinking than this. It's pretty disappointing.

the hundreds of people enjoying the park for various types of outdoor activity. Some people I have spoken to recently think the QBGP was stopped at SD Planning Commission and it's a done deal. Others think they will have a vote and they will then vote against it. Others will definitely get around to writing a letter. Yes, we are all very busy and we all need our down time, nothing wrong with that. However, the time for action is NOW not later! The end to the public and agency comments for this project is quickly approaching. If YOU don't stand up NOW and FIGHT this QBGP and let YOUR voice be heard...will you be one of those wishing you had done something about it?

This land surrounding the site has been set aside as a regional park. When has a park ever had a power plant built within its borders. Respect the designated land and all it offers its visitors and neighbors. Find another location more suited for a power plant.

Hello. There is another pressing issue impacting MTRP which may need your attention. According to the Tierra Times newspaper, Aug. 9. edition, the San Diego Unified School District is selling 11 acres of land that everyone already thought was MTRP. It is at the corner of Colina Dorada and Calle de Vida in Tierrasanta. Deadline for bids is Sept. 26. Is there anyway you can make sure this pristine land (and home of the endangered species fairy shrimp) becomes part of MTRP forever and not be sold for development? The San Diego Foundation (clearinghouse for local philanthropic efforts) may be able to help. See <http://www.sdfoundation.org>. I can e-mail you the Tierra Times article, if I had an address. Hope your group can do something. Thanks.

To whom it may concern, Please do not do this to this wonderful area of Mission Trails Park. We were guaranteed that this park would stay a park. With these large smoke stacks and the smoke going around the park trails we cannot see where this would not bother both the animals and the plant life herein. There are so many other pieces of land to put this on that would not ruin a Park as this would. Elections are coming and I would not like to see someone lose their job over this.

Since I learned about the proposed power plant, I have been opposed. Natural gas is a FOSSIL FUEL....we need to get away from fossil fuels and the pollutants they produce. I suggest SDGE look into how it can promote Solar energy. Especially in southern Calif., we have an abundance of sunshine. When we need it the most, on hot, dry days.....solar will be available. It's clean, renewable energy. The smart way to do it would be to put it in parking lots in schools, shopping centers and other areas with large parking lots. The solar panels would serve a dual purpose. They would provide energy and provide much welcome shade for our vehicles. This is the way to go. Do not put a polluting power plant adjacent to several highly populated communities (Santee, Lakeside, El Cajon, San Carlos, Tierra Santa) and a jewel like Mission Trails Regional Park. By now, you have all heard the arguments against this power plant. You will probably not hear anything new. All the 'old' reasons you have heard are valid....if you keep hearing the same reasons not to put the power plant in, there must be something to it. Think of the health and welfare of the people you are responsible to....make the right decision....learn more about solar energy and its benefits. Free dollars falling from the sun....Thank you. We petition the California Energy Commission, the San Diego Planning Commission, and all agencies to categorically reject any proposals by any entity to construct a power plant alongside Mission Trails Regional Park. The Quail Brush Power Plant will negatively impact anyone who lives, works, or attends school nearby, and anyone who frequents the park. The tranquility of our open-space park, a local and national treasure, with historical, geographic, and wildlife preservation value, will be adversely affected. Additionally, local communities cannot afford the property value decreases, and even stringent air quality standards will not prevent a diminished air quality from the plant's emissions. Our health and the lives of our children and elderly depend on your decision. To construct a power plant anywhere near Mission Trails, which has long been designated Open Space, and not an industrial area, is neither rational nor necessary. We request you halt the present siting of the Quail Brush Generation Project.

The City of San Diego Planning Commission has the interest of themselves in mind when considering the approval of a power plant on their eastern border, immediately next to neighborhoods and schools in the City of Santee. On the vast majority of days, pollution from the Quail Bush Power Plant will move towards the City of Santee and away from San Diego. The City of San Diego is being the bad neighbor by piling up their trash against their next door neighbors fence. But in this analogy, people's health is not effected, where the proposed power plant will have detrimental effects on people and the environment. If they truly need this power plant to be built, why are they not considering open space sites on the central or west side of the City of San Diego? Please do not allow a power plant to built in the midst of a growing urban area. There are many other options and the price to people's health is a price to great to pay. Thank you, Jeffrey Pruss Santee Resident

Please add me to the list of concerned citizens who oppose the proposed Quail Brush Generation Plant on the grounds that the proposal is a poor use of the land. The proposed QBGP is inconsistent with many of the City of San Diego's laws, ordinances, regulations, and standards (LORS). The project conflicts with: the East Elliott Community Plan, which designates the site as Open Space; the General Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). The proponents of the plant must obtain a community plan amendment, general plan amendment, and rezone from the City of San Diego. The proposed project is also located within the City's Multi-Species Conservation Program (MSCP) Subarea Plan, with which it is incompatible. To make the project consistent with the Subarea Plan, the applicant would need to obtain from the City a boundary line adjustment of the Multi-Habitat Planning Area to exclude the project site. The Taxpayers of San Diego County object to any further spending of California taxpayer dollars in pursuit of a project that violates so many key local land use provisions. Additionally the power plant siting threatens the well-being, health, recreation, natural beauty, quiet, property value and quality of life of all San Diego county

residents who use Mission Trails park or who live in the areas of Navajo, Tierrasanta and Santee due to the proximity to parks and residences. We urge the CEC to implement the No Project Alternative.

I vigorously echo the sentiments and opinions of my fellow neighbors. As a lifelong resident, I have watched as Santee has grown from a small, back country, family community to the diverse and multifaceted city of more than 50,000 inhabitants that it is today. The one thing that has stayed constant during this period, the most important reason I continue to choose to call Santee home, is the still present family community environment. Although Santee has had growing pains, our maturation has thankfully preserved this ever important continuity that is the soul of our area. From Santee Lakes and the San Diego River - the city and county parks, to Goodan Ranch/Sycamore Canyon and Mission Trails; this ethos has remained strong. The very last thing that our community needs, environmentally, economically, or politically is a heavily industrialized zone. Specifically, the proposed Quail Brush Power Plant that will blight our natural surroundings and ultimately destroy the very qualities that make Santee the "Jewel of the East County". I encourage every citizen of Santee to take a long view and realize how this industrialization will have a profound net negative impact on all of us. Save Santee, Save Mission Trails Regional Park. Stop re-zoning and the toxic Quail Brush Power Plant!

I like Mission Trails as it is...as a natural habitat, peaceful and serene, a non-polluting green zone, an oxygen producing microclimate. Will the Power Plant produce clean air?. Will it produce a living environment? The Power Plant idea is not a good idea, in fact, it's a terrible location. If you want more power go solar...better yet, encourage consumers to use solar power and low-voltage appliances such as Sundanzer 12 volt refrigerators and freezers. In this way you can actually conserve the power we use by a factor of 14 times less. For example, to power a conventional refrigerator requires about 14 solar panels, the cost of an inverter and copper wiring and batteries. By using a 12 volt solar refrigerator you can reduce the number of solar panels by a factor of 13, eliminate the inverter and use one twelve volt battery. With this option

2012-06-28 @
9:34:14 PM

you get the same benefits, use 1/14 less power and conserve the power that is already produced. This is a viable alternative. Building more power plants is not the answer. We need to conserve the power already produced by utilizing high efficiency solutions. With approximately 300 sunny days in the San Diego region it's insane to build another conventional power plant in a area known for its natural beauty...use SOLAR! There are enough household roofs to generate all the power that's needed, and feed the grid with the excess power. If this Power Plant is built I will move from San Diego, to a place that has a sane City Council and a sane Planning Commission. Please utilize different strategies for housing...include high efficiency zero-energy housing, LED lighting, ultra high-efficiency appliances, energy conserving "thermal flywheel" solutions, permaculture schemes, rainwater harvesting, gray water re-use, atmospheric water harvesting...not the same old, same old solutions that don't work for the FUTURE! WE NEED ALL THE OPEN SPACE LEFT THAT WE HAVE TO ENJOY...FOR YOUR FAMILIES AND FOR OUR FUTURE AS A BEAUTIFUL CITY AND FOR OUR CHILDREN TO COME AND OUR CHILDREN'S CHILDREN.....

The health and environmental hazards of this plant far outweigh any benefit. We must stop our dependency on fossil fuels and start implementing solar and wind wherever feasible. Every rooftop in San Diego County should be covered with solar panels, as well as every school, library and office building. We can reduce the need for dirty fuels and nuclear energy by proactively using sustainable energy and reduce our consumption as well.

It is amazing to think that a power plant would even be considered SO CLOSE to established, populated living areas. Power Plants belong in remote regions with low sociological, environmental and quality of life impact. As the town of Santee continues to expand and develop; The last thing it needs is a nucleus of noise and air pollution.

QUAIL BRUSH COMMUNITY PLAN AMENDMENT INITIATION --PROJECT NO. 2011-04 The Quail Brush project conflicts with the following documents: the East Elliott Community Plan, which designates the site as Open Space; the General Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). Cogentrix wants to amend the Community and General Plan by initiating a rezoning from residential to industrial in open space area that was designated to be protected. What is the specific justifiable criteria for initiating this change? Why is the city of San Diego even considering making changes to these plans and it's own codes at the expense of the surrounding communities and federally endangered species that live there? Is the building of the 11, 100 ft stacks, using technology that is dated and inefficient, far more important than our quality of life, health of our seniors and children, and the peace and tranquility that the Mission Trails Regional Park has provided since around 1962? Since the park was a 2000 acre gift from the Federal Government to be used for open space supporting the residential community, shouldn't the city of San Diego at least entertain the thought of supporting the federal government's mandate to move away from fossil-fuel based energy and instead look to solar energy? Solar panels on rooftops will harness surplus galore since San Diego gets abundant sunshine year round. We OPPOSE

this initiation and demand its withdrawal. We, the people are watching our cities' actions closely now and will find it suspect should the city of San Diego's Planning Commission vote to allow this permanently damaging change so that a power company can place their plant in a location that is most convenient and cost effective for them so they can increase their gross profits at the

so they can increase their gross profits at the communities' expense in every conceivable way.

It would be a complete travesty to impact our community in such a way. Santee has such a vast amount of outdoor activities that would be impacted by this. Don't we owe our children the opportunity to be outdoors without being negatively impacted? Both of my daughters will attend West Hills, and we frequently spend time in the surrounding areas. This plant would be irresponsible, and the health of our people would be at risk. I beg you to consider other options that would have less of an impact. Thank you

I grew up visiting mission trails and would be heartbroken if it was tarnished. The local wildlife in danger are some of the most dynamic and beautiful creatures and I have enjoyed them all my life. The trails provided an escape for when life got tough and released the stresses of busy city life with the profoundly gorgeous comforts of nature. Nature needs to be preserved, not a power reserve.

Building a power plant right next to the largest public use park in San Diego as well as across the street from a high school where kids are trying to learn is a very bad idea! I appose this plan as a voter. A plant like this should be built in an already industrial area that already has industrial buildings, noise and pollutants. We have our parks for a reason, to escape to nature for peace and solitude. They are already building a power link through Cleveland National Forest, Now they want a Power Plant at mission trails. Lets protect our parks, our public use and keep our schools safe. Regards, Joseph Beckerley 4059 Alabama St San Diego CA 92104

Adrian

This is unacceptable, this location is a prime workout for
my children, my friends and I have Soccer tournaments
near there weekly, if this is approved you will be tarnishing
a great eco-friendly family driven community.

I called City Hall on Monday and asked if we could put posters up in the parks. The person I talked to said they would have to OK it with the City Planner. I called again today (Thursday), Keith Till still hasn't gotten around to it yet, but will call me back when he gets to it. I emphasized time was of the essence.

It is my opinion that maintenance of the Mission Trails Park in its existing state outweighs the benefit of the proposed power plant. Alternative locations can be found for the plant, but the park cannot be relocated. We cannot continue to increase urban sprawl at the expense of our ever decreasing nature preserves. Mission Trails is currently among the largest urban land reserves in the US and I strongly believe we should keep it that way.

I have recently moved my husband, who is elderly and ill, from the clean mountain air of Pine Valley to Santee and I picked the area near the open space of Mission Trails because it is just that, open space. It would be a crime to build a power plant so close the this beautiful space, and destroy the quality of life for those of us who live here.

Our Home sits on the corner of West Hills
Parkway/Starpine and Mission Gorge where 77% to 100%
of the traffic to and from the Quail Brush Power
Generation Plant is expected to flow. We are unable to
sleep now due to all the commercial trucks using this area
all hours to access the freeways within the City of Santee.
More traffic to this area would be unbearable. Our vast
view of Mission Trails Regional park would be ruined and
our property value will drop significantly. Industrial
buildings have NO PLACE near residential homes and
and family's. Please deny the Quail Brush Generation
Power Plant Application with NO Alternative options.
Thank you

My mother lives in Santee in the same house where I grew up. If this plant comes in, not only will she have to sell and move out of Santee to continue to work on improving her health, but it will ruin mine and my husband's plans of eventually moving back to Santee some day. This power plant will not only pollute the air and decrease property values but it will destroy the beautiful place I once called home and would love to again.

I live in Northstar in Santee. Can I help passing out flyer in my neighborhood? I see the flyer from the Spread the Word page. I can print some pages out and put it in people mail box or slide it under their door. Will that help?

this plant should NOT be in an area where FAMILIES live, work and play. Alternative, safe sources of power are out there and available. use the money that would be spent on the power plant.....TO INSTALL SOLAR PANELS ON INDIVIDUAL HOMES. not only would the solar panels provide necessary power for the home where they are installed, the extra electricity they generate could help reduce costs for others. Additionally, the proposed location of the plant next to one of the largest regional parks in the nation is simply a bad, bad, bad idea. this space is used by thousands who lead otherwise harried lives. it is an escape from the frenzy.....people go there to relax, learn

2012-05-09 @ 8:13:42 AM

about and enjoy nature, to walk, run, ride bikes, enjoy the company of friends and family....don't dampen the joy by putting an offensive bulk of a power plant right next to the park....use your conscience, not your wallet when making the decision to REJECT this power plant....i love this country, but am saddened to see that money seems to be the bottom line for every decision that is made by those in power. again, picture yourselves living with a power plant near your homes and the places where you go to 'get away'....REALLY think about it.....what would you do THEN???

momentum is building. We can't fight them at their level on their terms. We need to wear buttons that say " You can't buy us." or "Cogentix, you can't buy us" if more people have buttons on, in a meeting, the attention will be on those that don't. They should be home made, cause we don't have the money to throw around

The whole reason we love living in San Diego is the quality of life, key word "quality", the steady erosion of our open spaces has diminished this quality, Santee is one of the few places left that has an amazing diversity of plants, animals and terrain that gives ALL of San Diegans a higher quality of existance. The mayor of Santee has allowed growth and development into the city that has made it a less pleasant place to live and visit, the reason people moved there is being chipped away at and will eventually be a distant memory of what a fine and unique place it once was. This is one of those sacred places in this county and our city that needs to be preserved for our future generations and to show that we value the "quality" of life more than temporary revenue. Our beaches, canyons, mountains, deserts and inner city open space is what gives this great region it's soul, without those things we are just a bulldozer away from becoming like Los Angeles. Once it's gone , you can never get it back. Please, do not approve this.

I'm absolutely appalled that this is being allowed to continue. 11 100 ft. high smokestacks? Power transmission lines? If this goes through my kid will NOT be going to West Hills High School in a year, that's for sure, as it will be directly downwind. And Santana is downwind as well. Nice. Nor do I believe for an instant that it won't be run 100% of the time. Cogentrix claims an agreement with SEMPRA (duh) that will limit it to run only 43% of the time. Yeah, and the instant it goes live SEMPRA will change the agreement to 100%, you watch. Like I'd trust SEMPRA with, well, anything. This must be stopped.

I strongly oppose the power plant. I personally know 2 young people who died of cancer, and many people in their surrounding neighborhood in Lakeside (el nopal area) who have or had cancer. Their families feel it is linked to the power plant tower close to their homes. Also as a property owner (17 years) in Santee we have already seen our property values drop drastically. This is the last thing we need.

I am a San Diego Resident and a home owner in Santee. I also work in the Santee/EI Cajon area as a high school teacher. I am alarmed that this power plant would be proposed so close to one of our high schools when ZERO emissions technology is available and would indeed work better than the proposed plant.

I have lived near mission trails all of my life and i take pride in the beauty and history that it holds. The idea of putting a power plant anywhere near this cherished park is disgusting and outraging. This It is the seventh largest open space urban park in the United States and i can't let it have the chance to be in anyway compromised by a power plant. This park is the jewel of the area and home to many delicate plants and animals, how could anyone willingly put their health at risk. I am 100% against this power plant and feel that we need to implement more ways of using smarter energy!

I am a runner for the PHHS cross country and track team and we go there often, it is definently one of the best places to run. Mission Trails is were thousands of San-Diegans go everyday. It's beautiful. By building a power plant it would create a commotion of angry citizens but also a health hazard to the citizens around that area. By the Santee side there are many motor homes and I would assume many people cannot afford to move away due to the economic crisis this country is facing at the moment. WE DON'T NEED A POWER PLANT!! Save Mission Trails!!!!

As a resident of Santee, I oppose the destruction of Mission Trails Regional Park, as well as, suffering from toxic pollutants, poor air quality and disturbing noise levels from the power plant. It also does not help that we already have a local landfill, but with the additional of a power plant, this will in fact lower even more our property values of our homes. STOP!

I am a homeowner who lives within a mile of this proposed project. I am sickened that anyone would even consider putting a power plant in this location. Please, please, please DO NOT support this construction. We have put up with enough noise pollution, traffic, and dirt during the construction of the 125 and 67 freeways. I paid \$330,000 for a property that is now valued at \$160,000. I am NOT short-selling, I AM continuing to pay my mortgage. Construction would decrease my home value even more.

I am a first time homebuyer that just moved into the highland trails community next to the Mission Trails Park. I am willing to spread the word and take action to stop the polluting power plant from coming to Santee. This is a great issue for the community to pull together and stop. I can't wait to become a part of stopping this polluting plant.

We do not need more power plants, particularly next to residential areas and in particular, a historical area. Mission Padre Dam and the Mission Trails area is a special, fragile, California historical site, where Native Americans lived, and where Father Serra began his irrigation system for the first mission in California, the San Diego Mission de Alcala. To build a power plant in this region is a slap in the face to all Californians. SDG&E is busily destroying the beauty and historic places in our county, and we must not allow this to continue. We need to get rid of monopolies that are out of touch with what the people want. There are legislative solutions to this.

Hello, I was just on the MTRP website, and two of the sponsors of Mission Trails Day on May 19 are Quail Brush Genco and SDG&E! Ironic, being that two of the three Mission Trails Day locations (the lake and equestrian area) will be impacted by the plant. The equestrian area is slated for free pony rides, outdoor rec demonstrations, and nature walks....imagine that in the shadow of the power plant. I spoke with an MTRP person at Earth Fair and she didnt seem to know much at all and didnt know why MTRP isnt taking a stance on the plant....maybe the sponsorships is why....conflict of interest, perhaps? Sounds to me like something is going on behind closed doors.

I am 30 yrs old, about to get married, no children, and have lived in Santee my entire life! I'm devastated about this! It makes me angry that they are willing to jepordize the lives of several families and wildlife. I really hope that the strong community Santee is we can stand tall and stop this!

I live just on the other side of the dam & walk the trails all the time. I think it will be a horrible mistake that can not be retracted once in place & it is going to destroy the beauty of this natural habitat! There are many animals alone that will be affected, not just us nature loving humans! It is a sin against nature if the city council allows this & they deserve to die a horrific death if they dont care about destroying such a wonderful place such as this! Please dont destroy this natural habitat, thank you!

I suggest that people who can write (at all) become official bloggers on Santee.Patch.com and start blogging on this topic, updating the community. That is a good way to rally people and inform the general public. Do it immediately if hasn't been done, you can get people to go to the meeting on 4/26 that way. The Patch has been very helpful in spreading the word on smart meters. Get the editor to do an article. Also, Miriam Raftery, of East County Magazine, www.eastcountymagazine.org, has been very helpful and will likely do multiple stories to alert the public, if you contact her. editor@eastcountymagazine.org is her email address. Write an editorial informing the public and ask for people to attend that meeting. Best to you all, Sue Brinchman Director, Center for Electrosmog Prevention

There are several reasons why my husband and I chose to buy our home in Santee and not in an area close to Oceanside. One of which was that it was free from large industry, especially power producing facilities, and all of the negative impact that comes with it. SDG&E does not have the right to degrade our home for profit. We, like many of our neighbors, are avid outdoorsmen. We enjoy hiking and biking at Mission Trails, climbing at Santee Boulders, and running in the area parks. A power plant in Santee undermines the essence of this community. There is no reason, if this facility were truly necessary, that it could not be built in the middle of nowhere. There is also no reason, in this technologically advanced era, that the corporations involved could not be the forefront of green energy production. Really, you want to ship in foreign gas to produce local energy? Seriously? What is wrong with you people? There is also no way that you can claim there would be no impact on the local area or residents. You can spin any statistic you want, you can glorify any glimmer of "benefit" you think you can identify, but I want my home to remain a healthy environment. I don't care about your company's profit margin. I care about the health of my family and my neighbors. Keep your plant out of my community. Please and thank you.

i do not want power plant to be built in santee. the effect it would have on the community, environment, wild life habitat destruction are some of the reasons i am opposing the building of the power plant in santee. i am sure there is a much more suitable location far away from the public and from such an important wild life habitat. i can not believe that you would want to build the power plant in this area to begin with.... come on now.

It would be crazy if this goes through. While those who enjoy these open spaces and would like to build trails for multi-use constantly get rejected for "environmental reasons" even though the impact is considerably less than constructing and operating a powerplant. Will the power plant even decrease the cost of electricity? Will it bring jobs to San Diegans (not out-of-towners working in San Diego, but jobs going to actual San Diegans)?

The proposed site for the Quail Brush power plant was chosen because it is CHEAPER for Cogentrix to build there....easy access to gas lines on Mast Blvd....Cogentrix is a money making business..their primary interest is the bottom dollar....my primary interest is in the quality of our community here in Santee, as well as surrounding areas, such as Mission Trails Regional Park, and the communities of Tierra Santa, Lakeside, San Carlos and El Cajon.....say A BIG NO to this location for the power plant! build out in the boonies where you don't have a city of 58,000+ people living adjacent to the plant.....where you don't have Mission Trails Regional Park, a place reserved for people who want to enjoy the serenity, peace and quiet of nature....NO TO THE POWER PLANT IN SAN DIEGO/SANTEE!!!

Siting the plant near population centers where emissions will drift over areas where people live and breathe is not a good idea! Putting these tall stacks near the Miramar Marine Air Base may not be safe for military jet flyovers. Putting this plant so close to the Mission Trails Regional Park will negatively affect park views and wildlife populations. Finally, planned Marine housing just west of the planned smokestacks will be right in the path of the west drift of the gas emissions. Santee will be to the east.

The Quail Brush project conflicts with the following documents: the East Elliott Community Plan, which designates the site as Open Space; the General Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). Cogentrix wants to amend the Community and General

ant.org/sign-
the-petition/

Plan by initiating a rezoning from residential to industrial in open space area that was designated to be protected. What is the specific justifiable criteria for initiating this change? Why is the city of San Diego even considering making changes to these plans and it's own codes at the expense of the surrounding communities and federally endangered species that live there? Is the building of the 11, 100 ft stacks, using technology that is dated and inefficient, far more important than our quality of life, health of our seniors and children, and the peace and tranquility that the Mission Trails Regional Park has provided since around 1962? Since the park was a 2000 acre gift from the Federal Government to be used for open space supporting the residential community, shouldn't the city of San Diego at least entertain the thought of supporting the federal government's mandate to move away from fossil-fuel based energy and instead look to solar energy? Solar panels on rooftops will harness surplus galore since San Diego gets abundant sunshine year round. We OPPOSE this initiation and demand its withdrawal. We, the people are watching our cities' actions closely now and will find it suspect should the city of San Diego's Planning Commission vote to allow this permanently damaging change so that a power company can place their plant in a location that is most convenient and cost effective for them so they can increase their gross profits at the communities' expense in every conceivable way.

Mission Trails needs to be left as it was intended to be left, which is as an open space in which the community can relax and escape from the suburban areas around it. A powerplant would ruin the overall feel of MT Park and deter people from using it and enjoying it.

The Proposed power plant that will be located next to Santee is a health hazard to all people that live in Santee, Lakeside, El Cajon and San Diego. It will affect the air quality for all children and will affect their physical health which can affect their mental health. There are numerous

70.166.17.212

http://stopthes
anteepowerpl
ant.org/sign-
the-petition/

studies that link pollution from burning fossil fuels (which natural gas is) to developmental problems in unborn children, and very young children. This power plant will be devastating to the Community and must be stopped.

This is a horrible injustice to put a power plant any where near the Mission Trails Regional park area where many wildlife in that area are compramisid with, the noise, excretions and various other problems associated with this atrocity. Not only that, i have lived in Santee since 1972. have raised my children here intentionally because of the quality of a small town atmosphere and if i had chosen to live in a city where there is industrial pollution, whether it be physical or having to view such an ugly site i would have moved to downtown san diego. Many people will move from here including me and who will pay the difference of the value of my house when this causes my property value to plummet. City values in downtown dont decrease because people who live their do so by choice and know that is the way of life. This is not the way of life out here. Santee is not downtown S.D. This community has a voice and choice. We have a right to be heard and this is not right.

This proposed power generation plant is too close to heavily populated towns & a huge regional park with the potential of creating irreparable damage to people & the environment. During construction it will disrupt the heavily traveled freeway causing gridlock during commute times. It is adjacent to a high school which has outdoor activities while the students breath in pollution.

I absolutely love Mission Trails. The fact that somebody wants to build a power plant there is just insane! I have been hiking there with my family since I could remember. Not to mention I take alot of beautiful scenery shots there with my camera. I hope we stop whoever is behind this cause its just plain sad.

What completely outdated thinking! To be even considering building a new fossil-fuel power plant in this day and age is just ridiculous! And it's not like there aren't wonderful alternatives, like, duh, solar! There's also a new energy supply model that the City of Santee could really use. It's called CCA or Community Choice Aggregation. See <http://www.sandiegoenergydistrict.org/> for lots more info on this.

I'm a junior at West Hills High School and life long resident of Santee. I get that Santee is one of the few places left in the county with room to expand but we are also home to 60,000 people, a world famous regional park, a nationally recognized high school (West Hills placed in the nation's best high schools this past year,) and of course the renowned Santee Lakes. We have the dump. We have the main women's prison. Do we really need to detract from the community any more? I believe that the county most have the expressed consent of the AFFECTED CITIZENS before it approves anything; restaurants, entertainment areas, schools, or power plants. No one wants this plant and as citizens of the city of Santee, we have the right to make sure that not so much as a nail purchased by this company is hammered in. But hey... that's just me...

This is really upsetting. It's a beautiful park that was meant to be a park!!!! It's also a beautiful residential area that we all love and have helped build. DO NOT BUILD YOUR STUPID POWER PLANT HERE! Surely there must be land out there that does not butt up to a beautiful park and residential area. Why don't you just update the San Onofre Power Plant????? It's already there.

We are a small community and are surrounded by hills. According to the way the building will be smoking through all the smoke stacks. The winds here come up from south east and will carry to all our homes. the school is located close to the building and the smoke is not helping the students lungs. Then, there is the problem of traffic caused by the many workers there and the streets will be stopped by traffic in the morning and afternoon.! We will do our best to stop the building!

We do not have a working home computer at the moment, thus I am leaving my sweetheart's e-mail. Suggest an alternative location for the Quail Brush Power Plant, vice too close to a wildlife sanctuary. Mission Trails park is not only a nature preserve, it is a federal & state historical site, where Padre/Father Junipero Serra established the first of the 21 Spanish Missions, also around the wildlife sanctuary are residential communities, churches and schools and the toxins from the plant will greatly affect everyone plants, insects, animals and human life. Thank you, Rod Adcox cell 808-343-9703 (I kept my cell phone # that I had in Oahu, Hawaii).

Respectfully urge both the energy company and the cities of Santee and San Diego look for another location for the proposed power plant, as in, placing it within a nature/wildlife area, is not the answer, as will adversely affect the plants, insects and animals, as well as humans

that live within this area. Suggest to place the power plant in an already industrial area that has room. Please keep in mind that there are endangered and threatened species within Mission Trails park. I recently photographed a least bell's vireo, which is just starting to come out of the endangered species category and into the threatened, it would be a shame for this animal to once again slip further down to extinction. I suffer from severe asthma and live in the San Carlos area right next to Mission Trails park, because it is currently a clean environment (in regards to lack of air pollution), with a power plant in this area, it would threaten my health. Please consider a new and better location for this power plant. Thank you kindly, Bonnie Flach cell 619-726-2019 & Rod Adcox

As a concerned citizen of Santee I am pleading with CEC and the city of San Diego to not build this Power Plant so close to our residential neighborhoods! It will be too close to West Hills High School, the ball park and the Mission Trails Park. Only harm can come to the citizens of Santee. Our valley will never be the same and the value of our homes (which we worked all of our lives for) will go down and down. Have a heart and please find a location that will not hurt anyone!!!!!!

Just a thought..have you ever thought about putting this matter on Cause.com? I saw an article about a woman that had some issue (forget what it was) and in days had thousands of people sign her petition. It can't hurt and would be an easy way to get people, even out of our area, to sign. There's an invitation spot where one can send a request to everyone in their address book to sign. Just a thought.....

I am in shock that this is even proposed!! There's WAY to many people who live in Santee! Who wants to live that close to a Nuclear Power plant. Just look at what happened in Japan!! I know its not likley for Santee to get hit with a sunami, but there's still earthquakes and who knows anything can happen!! Just think of all the Santee residents and high school students that would be in danger...

[Stop the Santee Power Plant] Contact

After attending the March 22 Quail Brush Generating Project workshop and the March 28 Santee City Council Meeting I strongly believe that the battle to stop this project can best be served by enlisting a broad coalition of individuals and organizations to support the fight. Santee should not have to carry this burden alone. Below are some thoughts on how to accomplish this: Contact elected officials and Chamber of Commerce members from the surrounding area: El Cajon, Lakeside, Alpine, Del Cerro, Allied Gardens, and Tierra Santa. Make them aware of the problem and enlist their support. This power plant, if built, will have the same impact on them and their communities as it does on Santee. They should mobilize to help stop the project. 2. Contact the following elected officials that have responsibility for the communities listed above: County Supervisor Diane Jacobs, State Assemblyman Brian Jones, and State Senator Joel Anderson. They should be involved with this and they should have the expertise and resources at their disposal to aid in the battle. 3. Contact the local Native American Tribes to enlist their support: Barona, Sycuan, and Viejas. Anything negative that happens in East County will have a direct negative impact on their communities and their business. They have the means to provide financial support for any costs associated with fighting the project. 4. Contact environmental groups such as: Sierra Club, San Diego County Wildlife Federation (they represent a large number of related but separate organizations that support saving the environment), Lakeside's River Park Conservancy, the Mission Trails Regional Park Foundation, and others that you may know of. 5. Contact each of the local television stations, the Union Tribune, other local newspapers, and the "talk" radio stations. Each of these can publicize the resistance movement and highlight the negative impacts this project will have on the area. Editorials against the project would be great. 6. Contact organizations such as the San Diego Natural History Museum's Canyoners. They are very protective of the environment and regularly lead hikes in Mission Trails, Mast Park, and Santee Lakes. People from all over San Diego County join these hikes and would be staunch supporters of the resistance movement. On another note: At both the March 22 and March 28 meetings there were comments that we need more than one "Intervener" working with the California Energy Commission (CEC). It's not clear to me why we don't have more people serving in that capacity. I'd be interested in getting information on how one becomes and

Hi, I spoke at the March 22nd meeting. I used to be in the land development field and can help by viewing the property plot maps and current zoning to see if there is a way to stop the zoning changes that they propose. This one aspect of the project can make or break the project at the planning level. I need a parcel number to pull the information, does anybody have it?

Last night at the Santee City Council meeting I was so proud of the citizens of Santee. Fighting this power plant is going to take all of us, and it was so rewarding to see so many people attending the meeting. I sat up last night thinking of other ways that we can all help. The committee of "Stop the Santee Power Plant" are doing an incredible job of keeping us informed and rallying us all together. I was wondering if there is a way to provide stickers/bumper stickers/posters for our cars so that hopefully others will notice and join our forces. The handmade signs and painted windows that I saw last night at the council meeting really impressed me, but we need to spread the word as far as we can. I'm putting a sign in my front yard today. We have to stop this. Thank you for your great work.

Conserving San Diego's natural foliage is becoming more difficult every day. If we place a power plant in that area. It takes away a big chunk of space that only so animals and plants to go. This will decrease natural wildlife that will greatly effect our health. Can you imagine looking outside your window and now seeing trees but tall smoke stacks, no chirping birds only pollution? Its not a quality way to live. Not here!

I am absolutely ooposed to the Quail rush project. If the powers that be think it's such a great idea to locate it in Santee let them put it in the middle of San Diego and see what their constituents think. I directly East of the proposed site and do not want their noxious emissions fouling the air.

to build here in Santee. What are they thinking? I live on Ranch Fanita, my home is in the path of the quality of air and the noise from the plant. Lets talk about what is it going to do to Mission Trails and it's wild life? Nobody would even want to to use Mission Trails to walk or hike. What about West Hills High school this plant is so close to this school. Air Quality, Noise, health issues? I DO NOT WANT THIS POWER PLANT HERE !!!!!!! I belive that IF they build this Power Plan,t you will have people leave their homes and Santee could turn into a gost town. Who would want to buy your home Knowing that a Power Plant is that close?

This is a serious issue and needs to be stop, try to find an alternative source like Solar power. Mission trails is one of the only places in the east county that has hiking, rock climbing, trails, biking riding and camping. We need to preserve our natural wild life parks! People's lives are at stake! Noise has the potential to cause stress reactions. Chronic noise-induced stress accelerates the ageing of the myocardium and thus increase the risk of myocardial infarction. The involved pathomechanisms include acute increase of catecholamines or cortisol under acute noise exposure and an interaction between endocrine reactions and intracellular Ca/Mg shifts. Chronic noise exposure of animals on a diet with suboptimal magnesium content led to increase of connective tissue and calcium, and decrease of magnesium in the myocardium. These changes were correlated to noradrenaline and normal ageing. Post mortem studies of hearts from victims of ischemic heart diseases confirmed the importance of Ca/Mg shifts in humans. Recent epidemiological studies support the importance of noise as a risk factor in circulatory and heart diseases, especially in myocardial infarction. Keywords: stress, catecholamines, cortisol, calcium, ageing, myocardial infarction.

My family and I are in shock that something like this could be developed this close to our home, no matter what city limit it is in. This has got to be stopped!!! We live within a mile of Mast and 52 freeway if this giant noise making polluting power plant is developed we will also move out of Santee!!!

I've lived in Santee my whole life and value my city. We've been fine without the power plant and the effects would be horrible. It would be next to my house and ruin our way of life. It would be ugly, loud, and create pollution. I will do ANYTHING to stop it if I have to.

The city of San Diego is trying to force more of its unwanted into the Santee area. First they transport the bums to santee/lakeside, then they pass a law so known gang members can't live within a certain milage of eachother forcing them to relocate to our neighbourhoods, now a power plant! This is horrid!

QUAIL BRUSH COMMUNITY PLAN AMENDMENT INITIATION –PROJECT NO. 2011-04 The Quail Brush project conflicts with the following documents: the East Elliott Community Plan, which designates the site as Open Space; the General Plan, which designates the site as Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). Cogentrix wants to amend the Community and General Plan by initiating a rezoning from residential to industrial in open space area that was designated to be protected. What is the specific justifiable criteria for initiating this change? Why is the city of San Diego even considering making changes to these plans and it's own codes at the expense of the surrounding communities and federally endangered species that live there? Is the building of the 11, 100 ft stacks, using technology that is dated and inefficient, far more important than our quality of life, health of our seniors and children, and the peace and tranquility that the Mission Trails Regional Park has provided since around 1962? Since the park was a 2000 acre gift from the Federal Government to be used for open space supporting the residential community, shouldn't the city of San Diego at least entertain the thought of supporting the federal government's mandate to move away from fossil-fuel based energy and instead look to solar energy? Solar panels on rooftops will harness surplus galore since San Diego gets abundant sunshine year round. We OPPOSE this initiation and demand its withdrawal!. We, the people are watching our cities' actions closely now and will find it suspect should the city of San Diego's Planning Commission vote to allow this permanently damaging change so that a power company can place their plant in a location that is most convenient and cost effective for them so they can increase their gross profits at the communities' expense in every conceivable way.

[Stop the Santee Power Plant] Contact

Good Morning, I just now am catching the S.D. news cycle of the Santee power plant & your groups opposition. This opposition group I'm afraid won't be very successful with the arguments & complaints of noise.... you all need a 'Silver Bullet' answer almost need to give them another proposal. I'm a native San Diegan, now living in AZ. I started a renewable company... you all need to rally your purchasing vote & voice that Cogentrix needs to install a renewable plant, you need to 'ASK' if they have reviewed alternatives, 'ASK' their engineers (who've got outdated education backing them) if they've reviewed ALL new renewable options.... THEN, ask them about my company, because they haven't reviewed all potential alternatives, they have NOT done their 'DUE DILIGENCE' for the 'Benefit of the Community & Clients' and there-for you as a group have an opportunity to 'Block' progression & then move that they complete their Due Diligence & offer something else more economical that benefits their company, community & clients. You all also need to then back those moves up, with a plan of your own. The community should go & state that they won't be utilizing the energy coming from that plant, that you as a group will install your own sources of renewable generators..... which is what I'm trying to do now with certain deregulated energy states. You all have a choice, Good Luck to you all !! Hope this helped, call or 'Friend' me on my Facebook page if I may be able to offer some additional suggestions.

We need to get people to install more home and business solar rather than putting in monstrous power plants that disturb the whole area. Santee must be protected. This power plant that is trying to be pushed down the throats of the Santee residents and the surrounding communities has blatant disregard for the long term safety of the community, adds to the pollution that would already exist do to highways 52, 125, 67 and Mission Gorge Road that funnels down and around the small valley that is filled with historic sites and preserves plus rare species. We do not need more arsenic in the air of this community and we definitely do not need more noise. This power plant should not be allowed to exist in this community. Alternatives

not be allowed to exist in this community. Alternatives need to be considered.

This is clearly an inappropriate site to construct a major power station. How can any responsible agency even consider using this area with it's close proximity to local schools, communities, and one of the most significant wildlife areas left in southern California. We already have to contend with a major landfill located in the same area. How much more can you dump on the citizens of Santee? Take it somewhere else.

QUAIL BRUSH COMMUNITY PLAN AMENDMENT
INITIATION –PROJECT NO. 2011-04 The Quail Brush
project conflicts with the following documents: the East
Elliott Community Plan, which designates the site as Open
Space; the General Plan, which designates the site as

anteepowerpl
ant.org/sign-
the-petition/

Park, Open Space, and Recreation; and the Municipal Code, which designates the site's zoning as single-family residential (RS-1-8). Cogentrix wants to amend the Community and General Plan by initiating a rezoning from residential to industrial in open space area that was designated to be protected. What is the specific justifiable criteria for initiating this change? Why is the city of San Diego even considering making changes to these plans and it's own codes at the expense of the surrounding communities and federally endangered species that live there? Is the building of the 11, 100 ft stacks, using technology that is dated and inefficient, far more important than our quality of life, health of our seniors and children, and the peace and tranquility that the Mission Trails Regional Park has provided since around 1962? Since the park was a 2000 acre gift from the Federal Government to be used for open space supporting the residential community, shouldn't the city of San Diego at least entertain the thought of supporting the federal government's mandate to move away from fossil-fuel based energy and instead look to solar energy? Solar panels on rooftops will harness surplus galore since San Diego gets abundant sunshine year round. We OPPOSE this initiation and demand its withdrawal. We, the people are watching our cities' actions closely now and will find it suspect should the city of San Diego's Planning Commission vote to allow this permanently damaging change so that a power company can place their plant in a location that is most convenient and cost effective for them so they can increase their gross profits at the communities' expense in every conceivable way.

Please consider the beauty of the Mission Trails Regional Park area, the amazing wildlife that prosper there, and why our national parks are built. Please do not create this power plant. Thank you, Corinne Beagan, San Diego, CA

We own a single family home a few miles away from the proposed site of the power plant, a home delightfully nestled in between the Mission Trails and Lake Murray

recreational parks in which we are planning on starting a family. The concept of building a fossil fuel burning plant in this day and age is ludicrous, let alone in land designated for and used as a recreational park. There must be numerous alternate locations further east & south which won't have the same impact on established neighborhoods and parks. Please, find a different site farther from population or stop the project completely. Best Regards,
Dennis & Lindsay Bollman Baltimore Dr, 91942

Although I am slightly biased because the power point would be a few miles from my house, I agree with what most users have said before. This is a horrible location decision. I regularly walk my dog through Mission Trails and the last thing I want to see is a power plant spewing smoke throughout the park. Additionally, I absolutely do not want to hear a "constant buzz and drone" at any point during the day or not. NO POWER PLANT!

This Power Plant will be right next to Mission Trails Regional Park which is the last pristine environment near an urban area where thousands of people come every week for peace of mind and beautiful scenery. It's also near a high school, 2 elementary schools and several residential neighborhoods. Your help in stopping this mess will be greatly appreciated!

I do not want to have a power plant in my city!! I moved to this area for a nice clean city to raise children. I would move again. I have 2 children in the Santee public school district, if I move you will lose school money.
