California Energy Commission DOCKETED 12-AFC-02
TN # 60489 August 7, 2012

Subject: STAFF'S REVISED DATA ADEQUACY RECOMMENDATION FOR HUNTINGTON BEACH ENERGY PROJECT (12-AFC-02)

On June 27, 2012, AES Corporation submitted an Application for Certification (AFC) to construct and operate the Huntington Beach Energy Project (HBEP). The HBEP is proposed to replace the existing Huntington Beach power plant on the 28.6-acre parcel, located in the City of Huntington Beach, California. The site is located on the Pacific Coast Highway, north of Huntington State Beach.

The proposed HBEP is a natural gas-fired, combined-cycle, air-cooled, 939-megawatt (MW) electrical generating facility. The project will consist of two power blocks, each composed of three natural gas combustion turbine generators with supplemental fired heat recovery steam generators, a steam turbine generator, an air-cooled condenser, and ancillary facilities and will connect to the existing high-voltage electric transmission and natural gas pipeline systems on the site, avoiding the need to construct any new offsite linear facilities.

On July 27, 2012, staff filed a recommendation indicating that the AFC was not yet complete. Staff determined the information contained in the AFC was deficient in five areas: Air Quality, Biological Resources, Cultural Resources, Public Health and Transmission System Design. On August 6, 2012, the Applicant filed a Supplement to the AFC. Staff has completed its data adequacy review of the supplemental information together with the original AFC and has determined that it meets all the requirements listed in Title 20 California Code of Regulations, section 1704, Appendix B (2007).

On August 3, 2012 the California Coastal Commission (CCC) submitted comments on staff's data adequacy review in accordance with the 2005 Memorandum of Agreement Between the Energy Commission and the CCC regarding the CCC's statutory role in the Energy Commission's AFC proceedings. In its comments, the CCC identified four specific areas of concern: biological resources (AFC Section 5.2); Geologic Hazards (AFC Section 5.4); Cumulative Impacts regarding a nearby proposed desalinization facility; and Alternatives. CCC has requested that the Energy Commission hold in abeyance any determination of data adequacy until its concerns are addressed. However, with the recent submittal of the supplemental information by the applicant, staff has determined that sufficient information has been provided to meet the data adequacy requirements of the Energy Commission's regulations. Energy Commission staff believe that some of the information needs identified by the CCC go beyond the scope of informational requirements in the Energy Commission's regulations, and the Energy Commission staff will work with the CCC to prepare data requests that will be sent to the applicant immediately following acceptance of the AFC as complete pursuant to the Energy Commission's regulations.

Attached is a revised summary table and data adequacy worksheets for all technical disciplines. The revised worksheets for the aforementioned sections identify the location of the supplemental information that was provided to fulfill the AFC data adequacy requirements.

At the Energy Commission's business meeting on August 9, 2012, I will recommend that the Energy Commission accept the AFC together with the Supplemental AFC and appoint a Committee for the HBEP. If you have any questions, please contact Felicia Miller, staff's Project Manager at (916) 654-4640.

Appendix B (g) (2) (C) (iii)	Copies of all new and updated DPR 523(A) forms. If a cultural resource may be impacted by the project, also include the appropriate DPR 523 detail form for each such resource;	Appendix 5.3C; <u>Data Adequacy Supplement, Attachment DA5.3-4.</u>	No <u>Yes</u>	Please include a map for each DPR 523 form associated with the Huntington Beach Generating Station (HBGS). The map may be a sketch map similar to that required on a Building, Structure or Object Record and must identify the subject element of the HBGS historic district in relation to the others. The Continuation Sheet on p. 10 of the HBGS DPR 523 form does not suffice because it shows the planned layout of the resource, not what was recorded during the historic built environment survey. Additionally, the provided sketch map is not to scale, contrary to the <i>Instructions for Recording Historical Resources</i> (Office of Historic Preservation, 1995, p. 18).

Appendix B (g) (1)	...provide a discussion of the existing site conditions, the expected direct, indirect and cumulative impacts due to the construction, operation and maintenance of the project, the measures proposed to mitigate adverse environmental impacts of the project, the effectiveness of the proposed measures, and any monitoring plans proposed to verify the effectiveness of the mitigation.	Sections 5.9.1; 5.9.2; 5.9.3.1; 5.9.3.3; 5.9.4; 5.9.5; <u>Data Adequacy Supplement, Section 5.9.3.3, pg 5.9-1.</u>	No <u>Yes</u>	There was no health risk assessment (HRA) for the construction phase of this project. Applicants' claim that "... the construction and demolition phase is temporary and finite and an assessment of the potential health impacts from the emissions of air toxic substances is not a SCAQMD CEQA analysis requirement (SCAQMD, 1993). Therefore, an assessment of the potential health impacts from toxic air contaminants (TACs) from construction activities was not conducted as part of this analysis." (5.9.3.3) The Energy Commission requires an assessment of all CEQA related impacts, including diesel emissions that occur during construction. To remedy this deficiency, the applicant needs to revise Section 5.9.3.3 to include an assessment of health risks during construction. This can include a screening-level assessment followed by a more in-depth analysis if the results of the screening analysis call for a more refined HRA. The more in-depth analysis can be provided early in the discovery phase, if needed.
Appendix B (g) (9) (A)	An assessment of the potential risk to human health from the project's hazardous air emissions using the Air Resources Board Hotspots Analysis and Reporting Program (HARP) (HSC §§44360-44366) or its successor and Approved Risk Assessment Health Values. These values should include the cancer potency values and noncancer reference exposure levels approved by the Office of Environmental Health Hazard Assessment (OEHHA Guidelines, Cal-EPA 2005). Appendix B (g) (5) (A)	A regional transportation setting, on topographic maps (scale of 1:250,000), identifying the project location and major transportation facilities. Include a reference to the transportation element of any applicable local or regional plan.	Figure 5.12-1	Yes	
Appendix B (g) (5) (B)	If the proposed project including any linear facility is to be located within 20,000 feet of an airport runway that is at least 3,200 feet in actual length, or 5,000 feet of a heliport (or planned or proposed airport runway or an airport runway under construction, that is the subject of a notice or proposal on file with the Federal Aviation Administration), discuss the project's compliance with the applicable sections of the current Federal Aviation Regulation Part 77 – Objects Affecting Navigable Airspace, specifically any potential to obstruct or impede air navigation generated by the project at operation; such as, a thermal plume, a visible water vapor plume, glare, electrical interference, or surface structure height. The discussion should include a map at a scale of 1:24,000 that displays the airport or airstrip runway configuration, the proposed power plant site and related facilities. Subsection 5.13.2.4, Assessment of Visual Effects (pp. 5.13-15 to 5.13-17). Section 5.13.3, Cumulative Effects (p. 5.13-19). (Subsections 5.13.2.5, Impact Significance, and Section 5.13.3, Cumulative Effects, very briefly address temporary construction-related effects [p. 5.13-18, bottom of the page; p. 5.13-19, first sentence in third paragraph].) No significant impacts are identified; therefore, no mitigation measures or monitoring plans are proposed.	Yes	
Appendix B (g) (6) (A)	Descriptions of the existing visual setting of the vicinity of the proposed project site and the proposed routes for any project-related linear facilities. Include:	Section 5.13.1, Setting and Affected Environment; Subsection 5.13.1.1, Setting; Subsection 5.13.1.2, Project Site (pp. 5.13-1 to 5.13-4). No changes to the existing linear components (transmission line, water lines, underground natural gas, and sanitary wastewater lines) are planned or required for the project (p. 5.13-1, middle of page; p. 5.13-3, bottom of page; Subsection 5.13.2.3.2, Electrical Transmission Lines (p. 5.13-12); Subsection 5.13.2.3.3, Pipelines (p. 5.13-12 to 5.13-13)	Yes

Appendix B (g) (6) (A) (ii)	Description of the existing visual properties of the topography, vegetation, and any modifications to the landscape as a result of human activities, including existing water vapor plumes, above-ground electrical transmission lines, and nighttime lighting levels in the project viewshed.	Subsection 5.13.1.1, Setting, (first paragraph on p. 5.13-1), briefly describes existing uses and terrain. Additional information on land uses, existing development, vegetation, and visual characteristics is on pp. 5.13-2 & 5.13-3. Subsection 5.13.1.2, Project Site, includes additional information on terrain and a description of the developed project site (p. 5.13-3). The existing power plant has an air-cooled condenser. There's no cooling tower to produce a visible water vapor plume. Existing electrical transmission lines are discussed in the middle of p. 5.13-2. Although existing nighttime lighting levels are not specifically discussed, existing development is discussed, which would include nighttime lighting typical of such development.	Yes	
Appendix B (g) (6) (B)	An assessment of the visual quality of those areas that would be affected by the proposed project. For projects proposed to be located within the coastal zone, the assessment should also describe how the proposed project would be sited to protect views to and along the ocean and scenic coastal areas, would minimize the alteration of natural land forms, would be visually compatible with the character of surrounding areas.	Subsections 5.13.1.4.1 (KOP 1), 5.13.1.4.2 (KOP 2), 5.13.1.4.3 (KOP 3), 5.13.1.4.4 (KOP 4), & 5.13.1.4.5 (KOP 5) describe existing visual quality (pp. 5.13-6 to 5.13-9). The existing plant is a "visual issue in the Coastal Zone of the City of Huntington Beach" (p. 5.13-8). It's stated that the proposed project would represent "a slight improvement over the existing visual quality of the project area," implying that no greater or further conflict or greater visual impact would occur in this coastal area. The project's consistency with the General Plan's Coastal Element is discussed in Table 5.13-3 (p. 5.13-22).	Yes

Appendix B (g) (6) (C)	<p>In consultation with Energy Commission staff, identify:</p> <p>i) any designated scenic roadways or scenic corridors and any visually sensitive areas that would be affected by the proposed project, including recreational and residential areas; and ii) the locations of the key observation points to represent the most critical viewing locations from which to conduct detailed analyses of the visual impacts of the proposed project. Indicate the approximate number of people using each of these sensitive areas and the estimated number of residences with views of the project. Also identify any major public roadways and trails of local importance that would be visually impacted by the project and indicate the types of travelers (e.g., local residents, recreationists, workers, commuters, etc.) and the approximate number of vehicles, bicyclists, and/or hikers per day.</p>	<p>Subsection 5.13.1.1, Setting, and Subsection 5.13.5.1.2, California Scenic Highway Program, discuss the Pacific Coast Highway in the project area (p. 5.13-3 and 5.13-20). Subsection 5.13.1.1 includes discussions of nearby recreational and residential uses. No trails are discussed. Bike route 10 is briefly discussed (p. 5.13-13) related to views of a proposed construction laydown area. KOP 1 is a view from Huntington State Beach (p. 5.13-5) where viewer sensitivity is characterized as high. The number of viewers is described as high. KOP 2 is a view from Huntington Beach Pier; viewer concern from this recreational area is described as high (p. 5.13-6). KOP 3 is a view from Edison Park, which includes descriptions of nearby residential uses and the moderately high number of viewers (p. 5.13-7). KOP 4 is a view from Magnolia Street, which includes a description of residential uses along the street; number of viewers is described as moderate (p. 5.13-8). KOP 5 is a view from Huntington-By-The-Sea Mobile Estates and RV Park, which includes views from residential areas; number of viewers is described as moderately high (p. 5.13-8). Appendix B (g) (6) (E)	<p>Provide the cooling tower and heat recovery steam generator (HRSG) exhaust design parameters that affect visible plume formation. For the cooling tower, data shall include heat rejection rate, exhaust temperature, exhaust mass flow rate, liquid to gas mass flow ratio, and, if the tower is plume-abated, moisture content (percent by weight) or plume-abated fogging curve(s). The parameters shall account for a range of ambient conditions (temperature and relative humidity) and proposed operating scenarios, such as duct firing and shutting down individual cells. For the heat recovery steam generator exhausts, data shall include moisture content (percent by weight), exhaust mass flow rate, and exhaust temperature. The parameters must correspond to full-load operating conditions at specified ambient conditions, and shall account for proposed operating scenarios, such as power augmentation (i.e., evaporative coolers, inlet foggers, or steam injection) and duct firing, or proposed HRSG visible plume abatement, such as the use of an economizer bypass. For simple-cycle projects, provide analogous data for the exhaust stack(s).</p>	<p>Subsection 5.13.1.1 describes existing power plant facilities, including the air-cooled condenser (p. 5.13-1). The existing and proposed projects do not include a cooling tower. Subsection 5.13.2.3.6, Water Vapor Plumes, describes the potential formation of rare and relatively small visible plumes from the heat recovery steam generator [HRSG] exhausts (p. 5.13-14). Moisture content, exhaust mass flow rate, and exhaust temperature are listed. It's stated that "[d]ue to the higher exhaust gas temperature, visible stack plumes would not be expected." Subsection 5.13.2.4.7, Water Vapor Plumes, states that "[n]o significant water vapor plumes are expected to form from HBEP, but there is the potential to create small visible plumes from the HRSG stacks when the HBEP is operated during times of low temperature and high humidity" (p. 5.13-17). It is further explained that these conditions would occur during cold nights and most likely not during clear weather conditions.</p>	Yes

Appendix B (g) (6) (G)	<p>An assessment of the visual impacts of the project, including light, glare, and any modeling of visible plumes. Include a description of the method and identify any computer model used to assess the impacts. Provide an estimate of the expected frequency and dimensions (height, length, and width) of the visible cooling tower and/or exhaust stack plumes. Provide the supporting assumptions, meteorological data, operating parameters, and calculations used.</p>	<p>Subsection 5.13.2.4, Assessment of Visual Effects, discusses the potential visual impacts at the KOPs for the project, potential light and glare effects, and visible water vapor plumes (pp. 5.13-15 to 5.13-17). All project effects are described as less than significant, and no mitigation is required. Section 5.13.2.5, Impact Significance, lists the aesthetic resources checklist questions from Appendix G of the State CEQA Guidelines, concluding that no impacts are considered significant. As discussed above, the applicant concludes that no visible water vapor plumes are expected to form from HBEP. It is also stated that there is a potential for creation of small visible plumes during cold nights (p. 5.13-17). Based on this conclusion, no modeling was conducted.</p>	<p>Yes</p>
