TITLE		PROJECT NAME	CEC BEP2
RE	BEP2 – Waste Discharge Requirements		

CONVERSATION SUMMARY

Construction SWPPP

On July 7, I asked Michelle Ochs if a construction related Storm Water Pollution Prevention Plan (SWPPP) would be required for BEP II. I noted that the BEP II applicant felt that a construction related SWPPP would not be required because they think that all runoff from the site during construction would be collected in the drainage channel network and stored in the retention basin eliminating discharges from the BEP I and II site. Michelle indicated that she was not the storm water staff member at the RWQCB, but that she would follow up with the appropriate RWQCB staff person. On July 8, Michelle followed up via voice mail indicating that a construction related SWPPP would be required for BEP II under the General NPDES Permit for discharge of stormwater associated with construction activity.

Operation SWPPP

On July 7, Michelle indicated that the RWQCB was no longer requiring natural gas fired power plants to develop and implement industrial SWPPP under the General NPDES Permit for industrial activity.

CEC DESCP Requirements

On July 7, Michelle and I discussed that the CEC requires implementation of a Drainage, Erosion, and Sediment Control Plan for both construction and operation activities and this plan should address the CEC's concerns related to potential runoff and erosion related impacts.
