10 April 2009

Commissioner James Boyd
California Energy Commission
1516 Ninth Street
Sacramento, CA 95814-5512
Fax: 916-653-3478

Re: CEC-800-2009-001-PMPD

Dear Commissioner Boyd,

Thank you for your thoughtful consideration of solar power as a viable alternative to the natural gas power plant being considered in Chula Vista. The letter below was signed by 665 people from all around California who recognize the important precedent this decision sets.

If you have any questions, please feel free to contact me.

Yours,

Rory Cox
California Program Director
Ph: 415.399.8850 x302
Email: rcox@pacificenvironment.org

DOCKET

07-AFC-4

DATE APR 10 2009

RECD. APR 13 2009

Commissioner James Boyd
California Energy Commission
1516 Ninth Street
Sacramento, CA 95814-5512
Fax: 916-653-3478

Dear Commissioner Boyd,

We, the undersigned, are Californians dedicated to keeping California's clean energy promise of accelerated renewable development and reducing greenhouse gas emissions and pollution. We are writing in support of the preliminary decision the California Energy Commission has issued regarding the Chula Vista Energy Upgrade Project (CEC-800-2009-001-PMPD). In particular, we agree with your conclusion that the project should be denied, and that solar photovoltaic technology may in fact be a more cost effective way to meet the peaking power need. With this decision, the Commission has set an historic precedent, in that any peaking power project proposed in California will need to demonstrate that it is more cost effective than solar PV.

As the preliminary decision rightly concludes, solar PV is a viable alternative to peak time fossil fuel generation, especially in an area such as San Diego county which has ample solar resources. It is most robust during peak need times, when the sun is shining. Unlike a natural gas peaking plant, solar PV does not add to local pollution, does not emit greenhouse gases, and does not kill fish. Its further development will help move the state towards its mandated goals of renewable energy development and greenhouse gas emissions.

In addition, the cost of solar PV is now competitive with natural gas generated electricity. A February 2009 study from Lawrence Berkeley Labs concludes that the average cost of these systems declined significantly from 1998 to 2007.

We are heartened to see that the California Energy Commission is taking steps which will further reduce these costs and help spread the widespread adoption of solar photovoltaics as a viable peak energy source. Thank you for supporting clean energy, and denying this power plant.

Yours,

Bonnie	Carpenter	94608	CA	Commissioner James Boyd, As you must well know, these are critical times in the history of Humankind and we must NOW begin the transition to renewable green energy over carbon based fuels. Not only will it begin to clean up our environment but it will also create more jobs for Californians. California has been the leader and trailblazer in the US, for alternatives that better serve the people and environment. I am personally involved in a startup green business in Sonoma county and am well educated on the realities of alternative energies and how they can actually create millions of jobs and up the GDP of California. This has been proven by countries such as Sweden, Iceland, New Zealand and Brazil who have prospered greatly once they turned away from carbon dependence and invested in the necessary infrastructure to meet their energy needs with alternative resources such as geothermal, solar and wind. These countries today are rated among the wealthiest by the IMF and it has a direct correlation to converting to clean and renewable energy. Presently, the US spends one billion dollars a day and a trillion annually to subsidize it's addiction to oil. This cost does not include the cost for wars to control resources nor the cost in human lives, extreme environmental degradation and violence against mother earth. Nor does it include the devastating economic drain on our Nation where war for resources is prioritized over the well being of our nation's people, environment, education, healthcare and jobs. As a California citizen I am very proud of your stand and pray the commission is able to stand it's ground against the muscle of those addicted to carbon who continue to push it even though we now know clean energy is now available and doable. Prayers and Blessings to the Commission to stand strong in these challenging times when the powers of those who stand to profit greatly from the old ways will push hard to get their way once again.

Please see that we have clean, readily available solar power NOW

This seems to be an intelligent alternative and we should pursue it and give it a chance.

Photovoltaics have not only become supremely efficient, they continue to improve.

California has long been one of the most prolific users of fossil fuels... we owe it to the planet....

Our planet is dying. Our only hope is to find non-polluting ways to power our planet.

Tis is a no brainer and although it may be a case of too little, too late, we have to do something to stop the destruction of the world.

save the planet!!!

For our health, clean air

Rodney		95616	CA	The time is ripe to say no to coal burning power plants.

Tony	Ebster	94501	CA	
Linda	McClure	92108	CA	

Thom	Harrison	94966	CA	...And let us not forget about the cumulative and future benefits of going solar, as oil becomes more scarce and potentially vastly more expensive, as the sun joyfully offers its rays free of charge... This is no-brainer. Wonderful to see that some of our governmental officials are using their brains in a responsible way. Sinsolarly, Thom Harrison Founder+CEO AlterECO,inc.
mike	shorts	94566		The obvious notion that solar isn't cost effective is starting to come down with the advent of new and smaller technologies. How can the R&D survive if there is no market and right now we need to invest in energy more than ever.
N. lin	Rowan johnson	93101 93001-2466	CA	a gun to our head, water where ice once was, air to be colored as brown..... and on we go when will we stop only those who control actually know... polar bears and wolves gonzo they be and speaking of bees when will we ever again see their numbers counted in trees... goodbye little winged jewels so free....
