Subject: City of Carlsbad Power Plant

To Whom It May Concern:

My family of four generations has lived in Carlsbad since 1959. We value the environment and the quality of life that exists and has been nurtured and developed. We treasure the natural coastline and recreation space of the beaches.

We are all against the installation or approval of a power plant being placed along the coast that is scenic and essential for sustaining the marine biology and geology. Putting a power plant along the coast changes the use to an industrial area.

It is not prudent to put a power plant that causes more air pollution and a fire hazard in a residential and recreational treasure. Not only is the plan for a power plant along valuable coast an insensitive choice and disrespectful for those that yearn for and enjoy beautiful scenery, but it also shows a lack of fiscal responsibility. The tourism industry will be negatively impacted as our beautiful coastline and sunset will be overcome by an industrial complex with skyscraping towers.

Please work to make a positive impact on the lives of people in the San Diego area by protecting this area. Once a power plant is constructed, it will destroy the area's unique and beautiful scenery forever. Once the beaches and coastline are lost, it will not be possible to reverse the action and restore this valuable resource.
