Reference: Proposed Carlsbad Energy Center Project

Dear Commissioners:

Please approve the Carlsbad Energy Center Project in the configuration proposed.

My family and I live in North San Diego County. We fully support the proposed Carlsbad Energy Center Project. We in the USA, California, and San Diego County **NEED** ample reliable and economical supplies of electrical power. Wind and solar are nice, and perhaps are the future, but when the wind don't blow and the sun don't shine - - - we NEED the good, reliable, 24/7 turbine power plant. The proposed Carlsbad Energy Center Project meets that **NEED**.

The Carlsbad Energy Center Project's proposed site is its ideal location. The small power plant will be located in a heavy industry environment consistent with its nature and purpose - - between an existing large power plant and the Interstate 5 Freeway, beside very active railroad tracks, and beside a soon to be built Seawater Desalination plant. Other less heavy industry and more neighborhood oriented sites in the community are feasible, but would have a significant negative environmental impact on any adjacent light industry and housing communities.

In summary, please do approve the Carlsbad Energy Center Project, at its presently proposed location.

Thank you for coming to Carlsbad (a long commute) and considering my (our) Project comments.

Sincerely,

James F. Crawford
