**Subject:** Re: Rice solar energy llc project " warning EPA. Water contamination. "

Hi Mr. Abraham

Thank you for taking time to review the proposed Rice Solar Project and offer comments or concerns. I have forwarded your note to our staff so it can be considered in our Staff Assessment.

Thank you,  
John

Hi john like to bring to your attention . the possibility of a huge " epa water contamination disaster" .. did. checking there is a large water aquifer underneath that area price army airfield .. that's a risk.. there's lots of fertilizer contamination already in the areas water so cal.. there's a lot better places to put that type of stuff on bml and some were else ? Processing problems consist of . Liquid salt (The salt s a mixture of sodium nitrate, a common ingredient in is a mixture of sodium nitrate, a common ingredient in fertilizer, and potassium nitrate, a fertilizer and food additive. These mineral products will be mixed onsite as received directly from mines in solid crystallized form and used without additives or further processing other than mixing and heating.), which has viscosity and appearance similar to water..... maybe spelled into the water system. Large lawsuit awaits as you have now been warned..... do email me your findings of my information is correct . salton sea water colorado river area has huge fertilizer runoff problem . mr abraham
